

Perfect 🚀 I'll prepare a **ready-made React project** for you so you can upload directly without touching any code.

◆ What You'll Get in the Zip File

The zip will contain:

```
genelyn-portfolio/
├── public/
│   └── index.html
├── src/
│   ├── App.js      ← portfolio code already added
│   ├── index.js
│   └── styles.css
├── package.json    ← tells Vercel how to run your site
├── package-lock.json
└── README.md
```

Everything is included except `node_modules` (Vercel/GitHub rebuilds it automatically).

◆ How to Use the Zip File

1. I'll generate the **zipped project folder** for you here.
 2. Download it to your computer.
 3. Go to your GitHub repo → **Add file** → **Upload files** → drag the **unzipped project folder** into GitHub.
 4. Commit changes.
 5. Head to Vercel → Import the repo → **Deploy**.
-

Your portfolio will then be live with zero coding needed.

Do you want me to create and send the **downloadable zip file** here now?
